

Battery Wiring Diagram

8 x 12v cells wired to 12v in parallel

All battery cables 25mm² HO7RNF minimum - larger systems need 35mm² or 50mm²

Most batteries have a specific torque setting for the terminal bolts - if you can't find the manufacturers settings, use approx 25 Nm (firm connection - don't overtighten). Remember to grease the terminals lightly with petroleum grease or vaseline to prevent corrosion, and cover all battery terminals to prevent shorts.
